AA CONNECTED CAR

Is a combination of hardware and software that allows vehicle owners or fleet managers to effectively monitor driving behaviour, and vehicle performance. A small device is fitted to your vehicle in minutes and the software – available on the web or on your smartphone – allows you to access a range of features, all directly downloaded from your vehicle.

But the most important feature of AA Connected Car is that the information collected is yours, and no-one else has access to it. AA Connected Car gives you information, and puts the power in your hands to use as you see fit.

EASILY INSTALLED HARDWARE

The hardware which drives AA Connected Car is simply installed through trained technicians. The cost of the hardware is included in the monthly fees paid for the service.

EASY TO USE SOFTWARE

The easy to use AA Connected Car software is available online or on mobile (Apple, Android and Huawei). Easy navigation and user friendly interfaces ensure a quick understanding of the system, and its capabilities.

WITH AA CONNECTED CAR

Owners and fleet managers will receive instant notifications, or they can log in online or on mobile devices from anywhere in the world, at any time. With the available information, AA Connected Car will enable you to save money, and improve the safety of you and your family, or fleet of drivers.
